

(CYBER) SELF-DEFENSE COURSE FOR YOUR EMPLOYEES WORKING REMOTELY

In the last couple of days, the world has witnessed an increase in cyber-attacks. Hackers are aware that due to the COVID-19 crisis, many people are actively working remotely. In these times, employees are often more restless, which reduces cyber awareness and therefore makes it easier for them to fall into a trap. With technology alone, you cannot adequately protect yourself against such attacks. Training your employees is therefore crucial so that they can recognise phishing attacks and respond appropriately, even when working remotely.

It is important that training is offered on a repetitive basis, in order for your employees to learn the right reflex. In this context, BDO offers a Phishing-as-a-Service (PhaaS) program. By training and making employees aware on a continuous basis, we ensure a significant improvement in your cyber security.

OUR APPROACH

the cyber world.

Determining the scope

through the various options and

develop the ideal scenarios for

your organisation. These are based

on the latest trends that occur in

With the exception of whitelisting our phishing platform, a simulation does not require the intervention of the internal IT department. The attack is coordinated so that there is no operational impact.

Analysis & reporting

This is a non-aggressive phishing simulation, which means that we do not capture any data (password & username) that may have been entered. Our simulations are fully focused on monitoring behaviour and the evolutions therein. In order to protect the anonymity of the employees, aggregated reporting is used.

S Repetition of the phishing cycle

At BDO, we believe that the creation of security awareness is a continuous process, not a one-off event. By repeating phishing simulations, adapted to the ever-changing cyber world, we continue to measure and adjust security awareness. In this way, employees remain aware of the threats and are less inclined to respond to a real external attack.

4 Creation of security awareness

Immediately after the simulations, the employees undergo a brief training that helps them to better recognise such attacks and report them to the IT department.

OUR CYBER SERVICES TAILORED TO YOUR NEEDS

Cyber security is a complex subject, in which many factors and measures come into play. In fact, this is probably one of the reasons why so many organisations are reluctant to take decisive action. Unfortunately, there is no such thing as perfect security, which is why it is important to apply a risk-based approach, focusing first on the highest priorities and risk components. We are happy to help you with that.

As an independent third party, BDO advises organisations to take appropriate cyber measures. As we do not

carry out technical implementations ourselves, we are completely independent and our focus is solely on the most pragmatic solution tailored to the organisation.

For each building block, we offer our customers a coordinated and technical approach with clear recommendations and concrete actions to ensure the confidentiality, integrity, availability and security of your data and systems. Our services are delivered by our certified and experienced professionals with the right, proven and effective tools for your entire organisation.

SOCIAL ENGINEERING

- Simulation of a phishing attack
- Physical security test

SECURITY AWARENESS TRAINING

- Live training on location
- eLearning modules with optional exam

ACCESS MANAGEMENT

- ✓ Logical access control review for applications and operating systems
- VULNERABILITY ASSESSMENT

 Deep technical analysis of IT infrastructure
- **PENETRATION TESTING**
- An ethical hack of your organisation

POLICIES & PROCEDURES

✓ Define and/or review the security policies and procedures

CONTROL FRAMEWORK ADVICE

✓ Prepare your organisation for control frameworks (e.g. ISO27001, NIS Directive, CIS, ISF, etc.).
